CURRICULUM

Bachelor of Science in Industrial Engineering (BSIE)

Academic Year 2018-2019

Reference CMOs: CMO No. 96 s. 2017, CMO No. 4 s. 2018 and CMO No. 20, s. 2013

Curriculum Description

Industrial Engineering deals with the design, improvement and installation of integrated systems of people, materials, information, equipment, monetary and energy to produce quality and cost - effective goods and services in a healthy and efficient work environment. The field of Industrial Engineering brings together the various sciences concerned with technology, the production of goods, performance of services and the way in which people work. It is the only engineering field with close links to management so many IEs move on to successful careers in management.

Program Educational Objectives of Industrial Engineering

The industrial engineering alumni three to five years after graduation shall:

- 1. Effectively practice Industrial Engineering in various functional areas of an organization.
- 2. Adapt Industrial Engineering practice to the changing needs of the society and achieve global competitiveness.
- 3. Adhere to professional, moral, ethical standards in the practice of industrial engineering.

Student Outcomes

The following skills, knowledge, and behaviors are expected to be attained by students as they progress through the program:

- a. Ability to apply knowledge of mathematics and science to solve engineering problems.
- b. Ability to design and conduct experiments, as well as to analyze and interpret data.
- c. Ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability, in accordance with standards.
- d. Ability to function on multidisciplinary teams.
- e. Ability to identify, formulate, and solve engineering problems.
- f. Understanding of professional and ethical responsibility.
- g. Ability to communicate effectively.
- h. Broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
- i. Recognition of the need for, and an ability to engage in life-long learning.
- j. Knowledge of contemporary issues.
- k. Ability to use techniques, skills, and modern engineering tools necessary for engineering practice.
- 1. Knowledge and understanding of engineering and management principles as a member and leader in a team, to manage projects and in multidisciplinary environments.

CURRICULUM COMPONENTS

CURRICULUM COMPONENTS			
Classification/ Field / Course		Hours/Week	Credit Units
	Lec	Lab	Credit Clifts
I. TECHNICAL COURSES			
A. Mathematics
